South Tangerang

Hello! I'm Gensza, a Full Stack Developer with 5 years of experience in developing web applications. I have strong experience building such as administrative and monitoring systems, including third-party service integrations. I'm passionate about creating scalable, efficient, and maintainable solutions that support complex business operations.

My technical expertise includes:
Golang (Gin), PHP (Laravel, CodeIgniter), JavaScript (React.js, Node.js, jQuery), RabbitMQ, Redis, Docker, SQL (MySQL, PostgreSQL) and CSS (Bootstrap, Tailwind CSS).

Work Experiences

Full Stack Developer - Freelance

January 2026 - Present

Developed an enterprise analytics dashboard, refactored, and migrated an ERP application for a gold and diamond jewelry store and production from a monolithic architecture to a semi-microservice architecture using React.js (frontend) and Laravel (backend). Managed the application deployment process on a VPS and integrated Google Cloud Storage for data management and storage.

Full Stack Developer - PT Satkomindo Mediyasa

October 2023 - December 2025

Developed and maintained request IP management application using Golang as backend services, CodeIgniter 4 for web applications, and JavaScript for interactive features. Integrated third-party network management tools (Infoblox) and built a monitoring application for SD-WAN network conversion and implementation, enabling real-time tracking from mobile field applications and office dashboards, including work list upload and progress monitoring.

Full Stack Developer - PT Lawencon Internasional

July 2022 - October 2023

Developed and maintained of client applications supporting network monitoring projects for all Bank BRI units across Indonesia. Designed and implemented a Network administration application from scratch using CodeIgniter 4 with Bootstrap-based UI, JavaScript for dynamic interactions, and a Golang for backend services. Containerized and deployed the application using Docker, improving deployment reliability, scalability, and long-term maintainability.

Projects

- **Dashboards and Migrated ERP Application**

Displays dashboard for top management monitoring and migration of ERP applications for a gold and diamond jewelery store and production modules.

- **Request IP Management Application**

The IP Request Management Application is used internally BRI to request the new IP Subnet , which is used for device network and hosted in the third-party application Infoblox.

- **Monitoring Conversion and Implementation SD-WAN Application**

This application is used internally BRI and internet provider in the field for upload the task lists capture and automatically generated task list documentation and the SIK projects.

- **Network Administration Application**

The Network Administration Application is used internally by BRI to procure new telecommunications networks in work units, relocate and reposition, and dismantle telecommunications networks that are no longer used by work units.

- **Integrated Network Monitoring Application**

This network monitoring application is used to monitor the entire BRI internet network in Indonesia, starting from ATMs, KC, KK and others.

- **IT Asset Aplication**

The IT Asset application is used for managing / monitoring data sets online, such as their latest condition, the number of assets per category, information on the location of these assets and maintenance of borrowing sets such as laptops, printers and so on.

Full Stack Developer - **PT Mulia Sawit Agro Lestari**

January 2021 - Juli 2022

Designed, developed, and maintained a suite of internal enterprise systems, including IT asset management, contract and sales invoice processing, warehouse logistics, cash and bank management, and general ledger applications. Implemented responsive user interfaces using Bootstrap templates, with CodeIgniter 3 as the full stack framework and JavaScript for interactive functionality.

- **Contract and Sales Invoice Application**

This application is used to create sales contracts and invoices for products such as CO, CGK & PK. in this application there are 3 types of contracts namely LTC (Long Term Contract), STC (Short Term Contract) & Spot.

- **Logistics Application (Warehouse)**

This Logistics application is used for warehouse needs for incoming stock of goods and outgoing stock of goods from the head office to the work site. which is directly integrated with the Cash Bank application.

- **Cash and Bank Application**

This application is used in accounting to carry out or control transactions related to expenses and income such as cash & bank, so that it can estimate or inform bank and cash balances every day.

- **General Ledger Application**

The General Ledger (GL) application is an accounting application to record all journal transactions, ledgers, to produce financial reports such as trial balances, profit and loss balances, etc. automatically.

Skills

Frontend: React.js, JavaScript, jQuery, Bootstrap, Tailwind CSS
Backend: Golang, Laravel, CodeIgniter, Node.js
Database: MySQL, PostgreSQL
Infrastructure: Docker, VPS Deployment, Linux Server
Messaging & Caching: RabbitMQ, Redis
Cloud: Google Cloud Storage

Educations

2016 - 2020

Pamulang University - Informatics Engineering
